

## **Продолжи последовательный ряд**

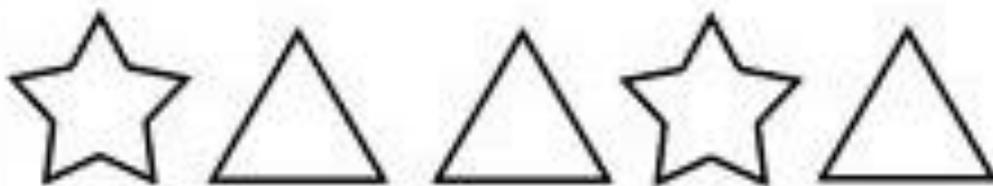

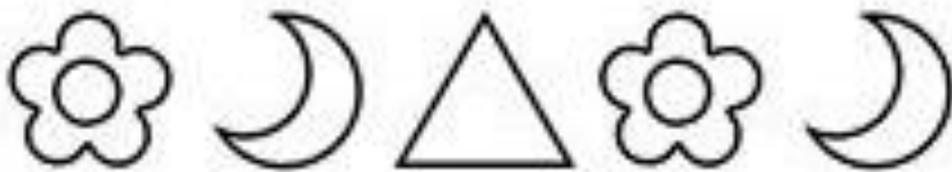

### **Развитие логического мышления детей от 4 до 7 лет.**

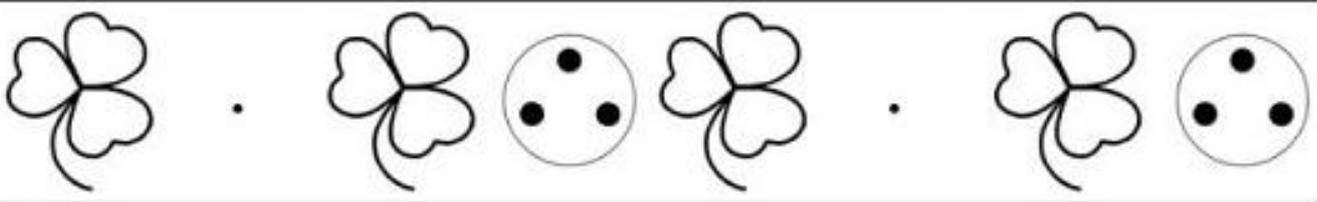

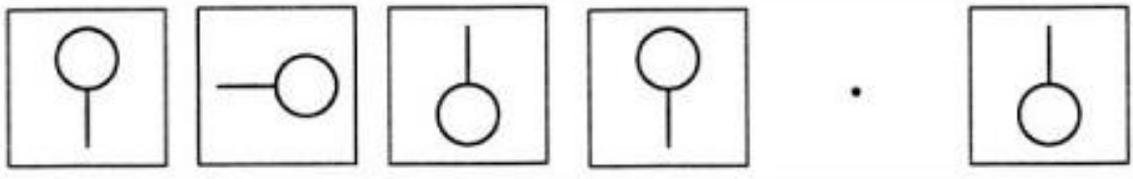

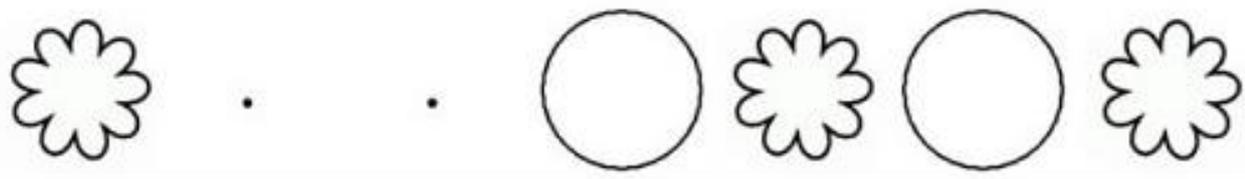

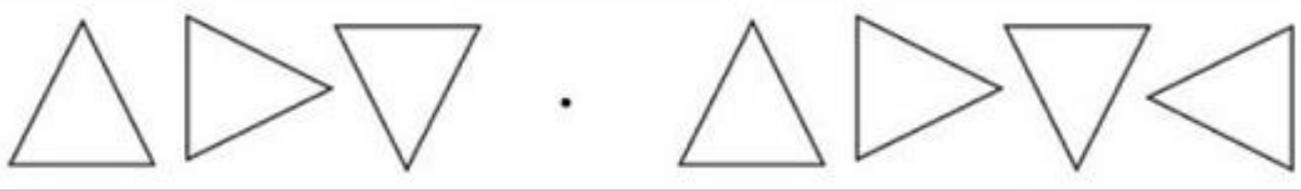

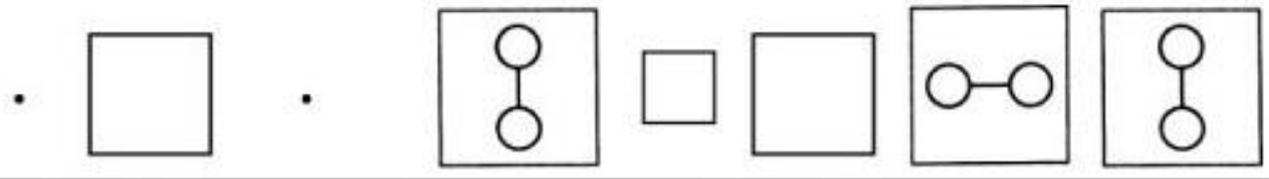

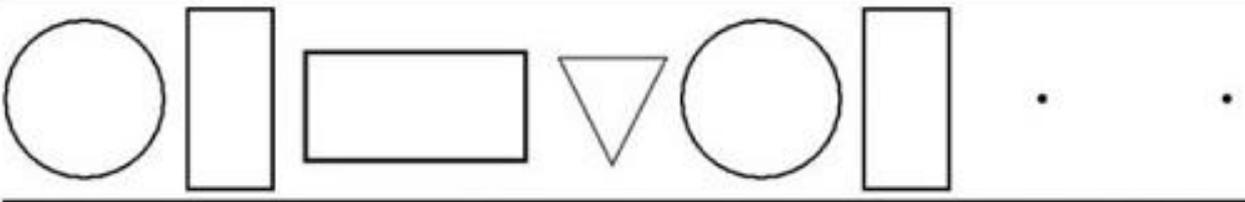

Уважаемые родители! Это задание является отличным помощником в развитии логического мышления ребенка, поскольку во время его выполнения он будет использовать такие логические приемы, как анализ, синтез, сравнение и т. д., находить определенные принципы и делать обоснованные умозаключения. В задании ребенку необходимо для каждого ряда определить принцип, по которому расположены его рисунки, то есть их определенную повторяющуюся последовательность, которая воспроизводится в ряду. Затем дорисовать рисунок, который по логике и, соответственно, по найденному принципу должен быть следующим.

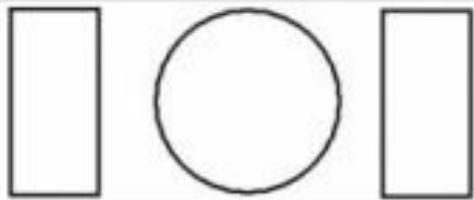

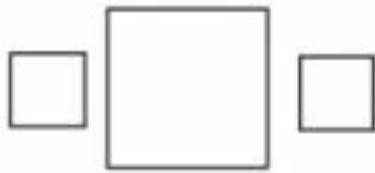

**Листочки с заданиями можно распечатать.**
